

## **Continuous Process Improvement Portal**

Per AFI 38-401, Continuous Process Improvement (CPI),

Continuous Process Improvement (CPI) increases operational capabilities while reducing associated costs by applying proven techniques to all processes associated with fulfilling the Air Force (AF) mission. The **goal of Air Force CPI** is to **eliminate waste while maximizing customer value**. Air Force CPI uses several widely accepted process improvement methodologies, including lean, six sigma, theory of constraints, and business process reengineering. Key principles contained in these methodologies include improving flow and reducing waste within a process, focusing on factors that degrade product quality, identifying and overcoming process constraints, and redesigning processes. The application of these principles enables Airmen to integrate continuous improvement into day-to-day operations across the full spectrum of AE operations.
